

# AXL F BK PN

## Axioline F bus coupler for PROFINET

### 1 Description

The bus coupler links a PROFINET network with the Axioline F system.

You can connect up to 63 Axioline F devices to an existing PROFINET system with the help of the bus coupler.

#### Features

- Up to 63 additional Axioline F devices can be connected
- 2 Ethernet ports (with integrated switch)
- Typical cycle time of the Axioline F local bus is around 10  $\mu$ s
- PROFINET RT and IRT
- PROFIsafe support
- Minimum cycle time of PROFINET for RT and IRT is 250  $\mu$ s
- Runtime in the bus coupler is negligible (goes to 0  $\mu$ s)
- Firmware can be updated
- MRP-Client
- Web-based management
- I&M 1-4
- Shared device
- Diagnostic and status indicators

This data sheet is only valid in association with the UM EN AXL F SYS INST user manual.  
For information on PROFINET basics, please refer to the UM EN PROFINET SYS user manual.

### 3 Ordering data

Description	Type	Order No.	Pcs. / Pkt.
Axioline F bus coupler for PROFINET (including bus base module and connector)	AXL F BK PN	2701815	1
Accessories	Type	Order No.	Pcs. / Pkt.
Axioline F bus base module for housing type BK (Replacement item)	AXL BS BK	2701422	5
Axioline F short power connector (for e.g., AXL F BK ...) (Replacement item)	AXL CN S/UL	2701421	5
RJ45 connector, shielded, with bend protection sleeve, 2 pieces, gray for straight cables, for assembly on site. For connections that are not crossed, it is recommended that you use the connector set with gray bend protection sleeve. (Connector/Adapter)	FL PLUG RJ45 GR/2	2744856	1
RJ45 connector, shielded, with bend protection sleeve, 2 pieces, green for crossed cables, for assembly on site. For connections that are crossed, it is recommended that the connector set with green bend protection sleeves is used. (Connector/Adapter)	FL PLUG RJ45 GN/2	2744571	1
Crimping pliers, for assembling the RJ45 plugs FL PLUG RJ45..., for assembly on site (Tools)	FL CRIMPTOOL	2744869	1
Zack marker strip for Axioline F (device labeling), in 2 x 20.3 mm pitch, unprinted, 25-section, for individual labeling with B-STIFT 0.8, X-PEN, or CMS-P1-PLOTTER (Marking)	ZB 20,3 AXL UNPRINTED	0829579	25
Zack marker strip, flat, in 10 mm pitch, unprinted, 10-section, for individual labeling with M-PEN 0.8, X-PEN, or CMS-P1-PLOTTER (Marking)	ZBF 10/5,8 AXL UNPRINTED	0829580	50
Insert label, Roll, white, unlabeled, can be labeled with: THERMOMARK ROLL, THERMOMARK X, THERMOMARK S1.1, Mounting type: snapped into marker carrier, Lettering field: 35 x 18.7 mm (Marking)	EMT (35X18,7)R	0801831	1
Documentation	Type	Order No.	Pcs. / Pkt.

User manual, English, Axioline F: Diagnostic registers, and error messages	UM EN AXL F SYS DIAG	-	-

## 4 Technical data

### Dimensions (nominal sizes in mm)

Width	45 mm
Height	125.9 mm
Depth	74 mm
Note on dimensions	The depth is valid when a TH 35-7.5 DIN rail is used (according to EN 60715).

### General data

Color	traffic grey A RAL 7042
Weight	177 g (with connector and bus base module)
Ambient temperature (operation)	-25 °C ... 60 °C (Mounting position: wall mounting on horizontal DIN rail) -25 °C ... 55 °C (Mounting position: any)
Ambient temperature (storage/transport)	-40 °C ... 85 °C
Permissible humidity (operation)	5 % ... 95 % (non-condensing)
Permissible humidity (storage/transport)	5 % ... 95 % (non-condensing)
Air pressure (operation)	70 kPa ... 106 kPa (up to 3000 m above sea level)
Air pressure (storage/transport)	70 kPa ... 106 kPa (up to 3000 m above sea level)
Degree of protection	IP20
Protection class	III, IEC 61140, EN 61140, VDE 0140-1
Mounting position	Any (observe temperature derating)

### Connection data

Designation	Axioline F connector
Connection method	Push-in technology
Conductor cross section solid / stranded	0.2 mm <sup>2</sup> ... 1.5 mm <sup>2</sup> / 0.2 mm <sup>2</sup> ... 1.5 mm <sup>2</sup>
Conductor cross section [AWG]	24 ... 16

### Interface PROFINET

Number	2
Connection method	RJ45 socket, auto negotiation and autocrossing
Transmission speed	100 MBit/s (Full duplex)
Transmission physics	Ethernet in RJ45 twisted pair
Transmission length	max. 100 m

### Interface Axioline F local bus

Connection method	Bus base module
Transmission speed	100 MBit/s

## Interface Service

Number	1
Connection method	Micro USB type B

## System limits

Number of supported devices	max. 63 (per station)
-----------------------------	-----------------------

### NOTE: Electronics may be damaged when overloaded

Observe the logic current consumption of each device when configuring an Axioline F station. It is specified in every module-specific data sheet. The current consumption can differ depending on the individual module. The permissible number of devices that can be connected therefore depends on the specific station structure.

## Protocols supported

Protocols supported	PROFINET, FTP, TFTP, PTCP, LLDP, SNMP, MRP, DDI, Boot P
---------------------	---

## Supply of the bus coupler

Supply of communications power $U_L$	24 V DC
Maximum permissible voltage range	19.2 V DC ... 30 V DC (including all tolerances, including ripple)
Current supply at $U_{Bus}$	2 A
Current consumption from $U_L$	typ. 105 mA (without I/Os and $U_L = 24$ V) max. 570 mA (with 2 A at $U_{Bus}$ for the I/Os and $U_L = 24$ V)
Power consumption at $U_L$	typ. 2.5 W (without I/Os) max. 13.7 W (with 2 A load at $U_{Bus}$ for the I/Os)

### NOTE: Electronics may be damaged when overloaded

Provide external fuses for the 24 V  $U_L$  area. The power supply unit must be able to supply four times the nominal current of the external fuse to ensure that it blows in the event of an error.

## Error messages to the higher level control or computer system

None

## Mechanical tests

Vibration resistance in acc. with EN 60068-2-6/IEC 60068-2-6	5g
Shock in acc. with EN 60068-2-27/IEC 60068-2-27	30g, 11 ms period, half-sine shock pulse
Continuous shock according to EN 60068-2-27/IEC 60068-2-27	10g

## Conformance with EMC Directive 2004/108/EC

### Noise immunity test in accordance with EN 61000-6-2

Electrostatic discharge (ESD) EN 61000-4-2/IEC 61000-4-2	Criterion B; 6 kV contact discharge, 8 kV air discharge
Electromagnetic fields EN 61000-4-3/IEC 61000-4-3	Criterion A; Field intensity: 10 V/m
Fast transients (burst) EN 61000-4-4/IEC 61000-4-4	Criterion B, 2 kV
Transient surge voltage (surge) EN 61000-4-5/IEC 61000-4-5	Criterion B; DC supply lines: $\pm 0.5$ kV/ $\pm 0.5$ kV (symmetrical/asymmetrical); field-bus cable shield: $\pm 1$ kV
Conducted interference EN 61000-4-6/IEC 61000-4-6	Criterion A; Test voltage 10 V

### Noise emission test according to EN 61000-6-3

Radio interference properties EN 55022	Class B
--	---------

## Approvals

For the latest approvals, please visit [phoenixcontact.net/products](http://phoenixcontact.net/products).

## 5 Internal circuit diagram

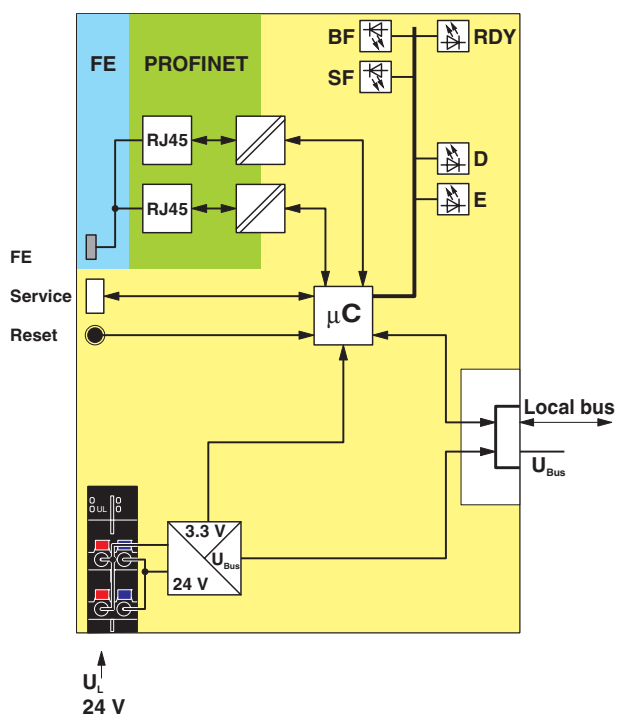

Figure 1 Internal wiring of the terminal points

Key:

FE	Functional earth ground
Service	Service interface
Reset	Reset button
Local bus	Axioline F local bus (hereinafter referred to as local bus)
	RJ45 interface
	Power supply unit with electrical isolation
	Microcontroller
	Power supply unit
	LED
	Electrically isolated area

## 6 Connecting PROFINET and supply

### 6.1 Connecting PROFINET

Connect PROFINET to the bus coupler via an 8-pos. RJ45 connector.

Figure 2 Pin assignment of the Ethernet socket (RJ45)

Only one twisted pair cable with an impedance of 100  $\Omega$  may be connected to each Ethernet interface in RJ45 format. The data transmission speed is 100 Mbps. The 100Base-TX port of the bus coupler is able to detect a pair of incorrectly connected receive cables (RD+/RD-) and to correct them using the auto polarity correction function.

For the pin assignment, please refer to the following table:

Pin	Assignment
1	TxD + (transmit data +)
2	TxD - (transmit data -)
3	RxD+ (receive data +)
4	Reserved
5	Reserved
6	RxD- (receive data -)
7	Reserved
8	Reserved

**Auto crossover**  
Both Ethernet interfaces are provided with the auto crossover function.

**Shielding**  
The shielding ground of the connected twisted pair cables is electrically connected with the socket. When connecting network segments, avoid ground loops, potential transfers, and voltage equalization currents via the braided shield.

**Observe bending radii**  
The housing dimensions specified under "Dimensions" refer to the bus coupler with I/O connectors without Ethernet connection. When installing the bus coupler in a control box, observe the bending radii of the Ethernet cables and the connectors used (e.g., FL CAT5 FLEX: 30 mm for fixed installation and FL CAT5 HEAVY: 30 mm without outer sheath and 45 mm with outer sheath). If required, use angled RJ45 connectors to maintain these bending radii.

### 6.2 Connecting the supply voltage - terminal point assignment

Figure 3 Terminal point assignment

Terminal point	Color	Assignment	
Supply voltage input			
a1, a2	Red	24 V DC (U <sub>L</sub> )	Supply of the logic voltage (internally jumpered)
b1, b2	Blue	GND	Reference potential of the supply voltage (internally jumpered)

## 7 Connection example

Figure 4 Connection of the cables

## 8 Local status and diagnostic indicators

Figure 5 Local status and diagnostic indicators

Designation	Color	Meaning	State	Description
UL	Green	<b>U<sub>Logic</sub></b>	ON	Communications power supply present.
			OFF	Communications power supply not present.
BF	Red	Communication error ( <b>B</b> us- <b>F</b> ail)	ON	No link status available on any port
			Flashing	SF LED not flashing: Link status available, no communication connection to the PROFINET controller
			Flashing	SF flashing: Hardware watchdog triggered
			OFF	A PROFINET controller has established an active communication connection to the PROFINET device.
SF	Red	System failure (PROFINET)	ON	PROFINET diagnostics available
			OFF	PROFINET diagnostics not available
			Flashing	Flashes only together with the BF LED; watchdog triggered
RDY	Green/ yellow/ red	<b>Ready</b>	Green ON	Device is ready for operation.
			Flashing green/ yellow	Communications power undervoltage or surge voltage Overtemperature
			Flashing green, yellow on	Device is in standby mode.
			Yellow ON	Firmware/bus coupler is booting
			Yellow flashing	Firmware update is being performed.
			Flashing yellow/ red	Firmware update has failed.
			Red flashing	Faulty firmware
			OFF	Device is not ready to operate.

Designation	Color	Meaning	State	Description
D	Green/ yellow/ red	Diagnostics	Green ON	Run: Data exchange; status and data from the higher-level system is transmitted.
			Green flashing	Active: configuration is active, data exchange with invalid process data, PDI channel can be used.
			Yellow ON	Ready: Device is ready to operate, no data is exchanged.
			Yellow flashing	Access from Startup+; device is in Force mode
			Flashing yellow/ red	Local bus error; device is in Force mode
			Red flashing	Local bus error on startup
				Configuration cannot be generated, information is missing from a device
				Chip version of a device is <V1.1
				The desired and actual configuration are different
				No local bus device connected
				The maximum number of local bus devices is exceeded.
			Red ON	General local bus error
				Communication error
				Local bus device has been removed or configured device is missing.
				Reset at a local bus device
				Serious device error at a local bus device (local bus device can no longer be reached)
E	Yellow/ red	Error	Yellow ON	I/O warning at a local bus device
			Red ON	I/O error at a local bus device

## 9 Diagnostic indicators for PROFINET

### States during operation

LED	Meaning
SF OFF/ BF OFF	PROFINET controller was able to establish communication without errors.

### States in the event of an error

LED	Meaning	Measure/remedy in the event of an error
SF OFF/ BF flashing	PROFINET device is waiting for communication with the PROFINET controller.	No error
	The logic communication connection has been interrupted. The PROFINET controller can no longer be accessed.	Check the connection between the PROFINET controller and the PROFINET device. Make sure that the PROFINET device name of the PROFINET device is identical with the configuration.
	The PROFINET device is not assigned a PROFINET device name.	Assign the PROFINET device name using the relevant tool.
SF OFF/ BF ON	The physical communication path has been interrupted. The PROFINET controller can no longer be accessed.	Restore the physical connection between the PROFINET controller and the PROFINET device.
SF ON/ BF OFF	Diagnostic data is available.	Read the diagnostic message using the relevant tool.
SF flashing/ BF flashing	Hardware watchdog has been triggered.	Execute a reset. Replace the device when the error occurs again.

### States during firmware update

LED	Meaning
RDY flashing	BootP requests are sent and the firmware container is loaded via tftp.
RDY ON / M ON	Firmware is saved.

The firmware update can take several minutes.

The bus coupler is restarted automatically after a successful update.

## 10 Diagnostic alarms

PROFINET enables the PROFINET device to store diagnostic information together with the error location and error type.

In the default upon delivery the alarms are enabled, however, they can be disabled with parameters on startup.

An incoming alarm informs the PROFINET controller that diagnostic information has been stored.

When the diagnostic information has been removed, an outgoing alarm is transmitted to the controller.

If at least one piece of diagnostic information is stored, the SF LED is on. If no diagnostic information is present, the SF LED is off.

## 11 Startup

### Default upon delivery/default settings

By default upon delivery, the following functions and features are available:

PROFINET name:	No name assigned
IP parameters:	0.0.0.0
Module designation:	AXL F BK PN

Vendor ID:	00B0 <sub>hex</sub>
Device ID:	1000 <sub>hex</sub>

### Firmware started

Once you have supplied the bus coupler with power or pressed the reset button, the firmware is started. After completion of the firmware boot process the BF LED is either on or flashing.

## Reset button

The reset button is located beneath the top marking label on the bus coupler.

Figure 6 Reset button

1 Labeling field

2 Reset button

The reset button has two functions:

- Restarting the bus coupler
- Resetting of the default settings

Holding down the button during the initialization phase restores the default settings.

If you wish to restore the default settings, proceed as follows:

- Disconnect the power to the module.
- Press and hold the reset button.
- Switch on the power.

The LEDs indicate the initialization phase:

LED	State	Meaning
RDY	OFF	Starting firmware
RDY	Yellow ON	Initializing firmware
RDY	Green	Initialization complete

- When the RDY LED lights up green, release the button.

The default settings are restored.

## Documentation

How to assign the PROFINET names and the IP address as well as how to startup a device within a PROFINET system is described in the following documents:

- "PC WORX" quick start guide
- "Configuring INTERBUS devices in a PROFINET network using the example of STEP 7" quick start guide

For the order designations, please refer to the ordering data.

The documentation can be found on the Internet at [phoenixcontact.net/products](http://phoenixcontact.net/products).

## 12 Service interface

The service interface is located beneath the top marking field on the bus coupler.

The service interface is used for diagnostics, for parameterization, and for testing I/Os before startup.

Figure 7 Service interface

1 Labeling field

2 Service interface

## 13 Parameterization

### PC Worx

Parameterization of the PROFINET device in PC Worx requires at least PC Worx Version 6.30. This is part of the AUTOMATIONWORX Software Suite 1.80 and 1.81.

An online data sheet of the device with important technical data and a configuration file are integrated into PC Worx. If several versions of the configuration file are available, make sure that you are working with the file version that corresponds to the firmware/hardware version used.

### Other tools

The PROFINET device is parameterized using the configuration tool of the PROFINET controller. Please integrate the corresponding GSDML file of the bus coupler into the relevant software tool (STEP 7/HW Config, ...).

Make sure you always use the latest version of the FDCML/GSDML file and the latest documentation for the bus coupler. The latest files and documentation can be found on the Internet at [phoenixcontact.net/products](http://phoenixcontact.net/products).

## 14 Device replacement

Devices can be replaced without having to reconfigure them within the PROFINET network. The station name and address are assigned by the control system to the newly added PROFINET bus coupler using the neighborhood detection function.

## 15 Phoenix Redundancy Layer (PRL)

The Phoenix Redundancy Layer (PRL) makes it possible to design a redundant system with two PROFINET controllers. One controller is configured as the primary I/O controller and the other as the backup I/O controller. Depending on which PROFINET controller provides valid values, the bus coupler operated at field level adopts these values or uses failsafe values.

PRL (or shared device) and MRP can be used simultaneously if the PROFINET update time is  $\geq 8$  ms and the PROFINET watchdog time is  $> 200$  ms.

## 16 Dynamic configuration on the local bus

You can use the "Dynamic configuration" function with this bus coupler.

Dynamic configuration is the specification and configuration of a maximum configuration. Any subgroup of this maximum configuration can be operated.

## 17 Substitute value behavior

When PROFINET communication breaks down or an error occurs in the local bus, all outputs of the Axioline F station are set to the parameterized substitute values. The local bus continues to run with these values.

## 18 WBM - Web-based management

The device has a web server, which generates the required pages for web-based management and, depending on the requirements of the user, sends them to a standard web browser. Web-based management can be used to access static information (e.g., technical data, MAC address) or dynamic information (e.g., IP address, status information).

### Calling web-based management

The device web server can be addressed using the IP address if configured accordingly. The homepage (web page) of the device is accessed by entering the URL "http://ip-address".

Example: <http://172.16.113.38>

## 19 Firmware update

In order to update the firmware of the bus coupler, the device must be provided with a firmware container via a TFTP server. You can use any TFTP server, e.g., Factory Manager.

The TFTP FIRMWARE UPDATE application note describes how to update the firmware using the Factory Manager. This document can be found on the Internet at [phoenixcontact.net/products](http://phoenixcontact.net/products).

Please refer to the "Diagnostic indicators for PROFINET" section for the LED states during the firmware update.

## 20 Simple Network Management Protocol - SNMP

The bus coupler supports SNMP v1 and v2c.

### Management Information Base - MIB

The corresponding latest MIBs are available on the Internet at [phoenixcontact.net/products](http://phoenixcontact.net/products).

For the object descriptions, please refer to the ASN1 descriptions for this product.

The password for read access is “public” and cannot be changed.

By default upon delivery, the password for write/read access is “private” and can be modified at any time.
